**REASONS FOR ALLOWANCE / EXAMINER'S COMMENT**

1. It appears that the PCT/ISA/210 search report (having a mailing date of August 30, 2005) in the international application (PCT/EP2005/000554) contained references which have not been cited in an Information Disclosure Statement. These references must be cited in an Information Disclosure Statement to be considered by the Examiner.

2. The following is an examiner's statement of reasons for allowance:

Regarding Claim 1, the invention as claimed, specifically in combination with a photometric head for illuminating an object with a predefined brightness value, a displacement unit for varying the axial distance between the high-power light source with the first optical element and the inlet of the optical waveguide, wherein the cross-sectional surface of the focal point is at least twice as large as the cross-sectional surface of the optical waveguide on the light inlet side, and the intensity of the light coupled into the optical waveguide can be varied by axial displacement of the high-power light source, is not disclosed or made obvious by the prior art of record.

Regarding Claim 10, the invention as claimed, specifically in combination with a photometric head with a photosensor, and coupled to an optical waveguide, with a variable amount of light coupled into the optical waveguide by varying the axial distance between the high-power light source and the light inlet face of the optical waveguide, the cross-sectional surface of the light beam path at the focal point is at least twice as large as that of the optical waveguide on the light inlet side, and the illumination of the of the object is controlled by means of the photosensor, is not disclosed or made obvious by the prior art of record.

Art Unit: 2878

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nishioka US 4,678,900 teaches an illumination unit with a photometric head having a photosensor and optical waveguide attached and a means for varying the intensity of the light output, but does not disclose a displacement unit for varying the axial distance between the light source and the inlet of the optical waveguide and varying the light intensity, and does not disclose the cross-sectional surface of the focal point as at least twice as large as the cross-sectional surface of the optical waveguide.

Dubois et al. US 2004/0156098 teaches an illumination unit using a liquid core fiber but does not disclose the displacement unit or the cross-sectional surface of the focal point as at least twice as large as the cross-sectional surface of the optical waveguide.

Yoneda et al. US 6,832,849 teaches an illumination unit with a photometric head having an optical waveguide, but does not disclose a displacement unit for varying the axial distance between the light source and the inlet of the optical waveguide and varying the light intensity, and does not disclose the cross-sectional surface of the focal point as at least twice as large as the cross-sectional surface of the optical waveguide.

Lemke US 5,615,938 teaches an illumination unit with a first optical element, an optical waveguide, and a displacement unit for varying the axial distance between the

Art Unit: 2878

light source and the inlet of the optical waveguide with the intensity of the light coupled into the optical waveguide varied by axial displacement of the light source, but does not disclose a photometric head or the cross-sectional surface of the focal point as at least twice as large as the cross-sectional surface of the optical waveguide.
